GGRCAIS

WARNING

The GGR Cold Air Induction System (CAIS) is designed as a direct replacement for the standard air filter assembly. Although fitting of this is not overly complicated, great care should be taken to follow these instructions to prevent damaging your new ST.

If you have any doubts about your abilities to fit this item, we would strongly suggest that you have this done professionally!

Familiarise yourself with the component parts and read through these instructions before starting anything.

Please take care to ensure that no foreign bodies can enter the inlet pipework etc. whilst you have hoses removed, as the delicate turbocharger compressor wheel could easily become damaged.

Graham Goode

INSTRUCTIONS

1. Loosen the lower hose clip.

2. Carefully disconnect the airflow sensor.

7. Fit new bonnet release cable bracket.

3. Unhook the rubber gasket.

4. Carefully lift the airbox up and out of its rubber mounts.

8. Re-route bonnet release cable between radiator cowl and the front panel then re-connect in its revised position.

5. Remove the rubber gasket.

6. Disconnect the bonnet release cable.

9. Remove intake elbow from standard airbox.

10. Replace original screws with the 2x5mm screws supplied.

11. Remove rubber bobbin from standard airbox.

12. Refit the original elbow on to the GGR CAIS using the 5mm bolts.

13. Refit the rubber bobbin into the GGR CAIS using a small amount of lubrication.

14. Refit GGR CAIS carefully onto the front air intake and then into its mounts.

15. Refit and tighten the air intake hose clip.

16. Refit the airflow sensor plug. release cable.

7. The installation is now complete periodically check everything and if you do not have the necessary skills or tools to do the work please let a specialist do it for you.
